

THE MISSING PANDA

UMM AL-QURA UNIVERSTY-COMPUT SCIENCE
SUPERVISOR:DR.AMNIAH NAGOOR

OUR TEAM

Team Members	Student ID	Team Tasks
Ethar Tamim	446000516	Designing panda objects and constructing the environment (lake, trees, ducks), along with placing a photo in the background.
Layan Alshreef	44610583	Implementing scene 2 (mother panda searching)including translation,rotation,eyes,eyebrows,and adding text"Where is my baby?!" and adding a background image.
Sama AlSilaimi	446004294	Implemented Scene 3 by animating the panda's movement, adding the rabbit's simple motion, drawing the background with the trees and sun, creating the ducks' wave-like animation, and displaying the text at the right moment in the scene.
Munirah Ali Sulaiman	446003246	Redesing the panda mom and the environment to suit the scne 4 that Described change in the weather condition with another image in the background
Raghad Almatrfy	446000651	Concept of scene 5 is finally, the mother panda finds her baby and moves toward him for a warm hug,(when the mother hugs her baby, animated hearts appear to symbolize the love between them), and shows " Family is the most important thing"

INTRODUCTION

Abstract

A story in an animated format was created with OpenGL showing the adventure of a mother panda looking for her missing baby in the woods. The project is designed with both geometric and animation components to form an exciting tale.

Goal

- Technical Application: Transforming math and geometry into animated visual scenes.
- Animation: Learning how to transition between scenes and create changes in states such as walking cycle and rain animation.
- Design: Creating characters and settings out of primitives such as circles and polygons.

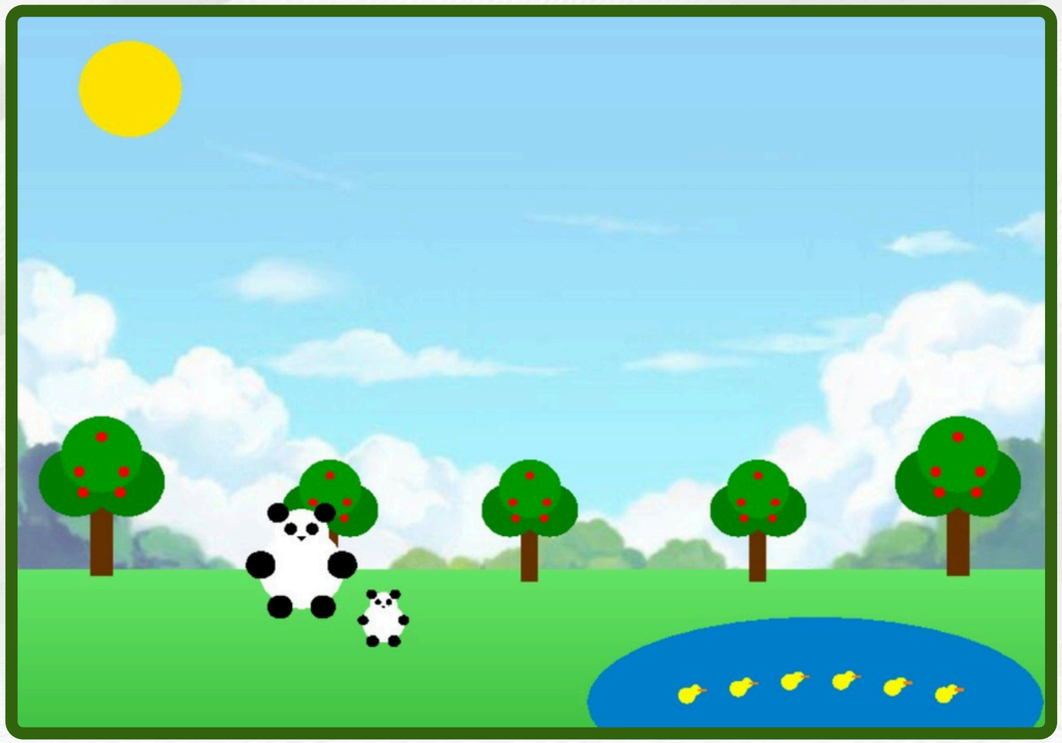

Contributions

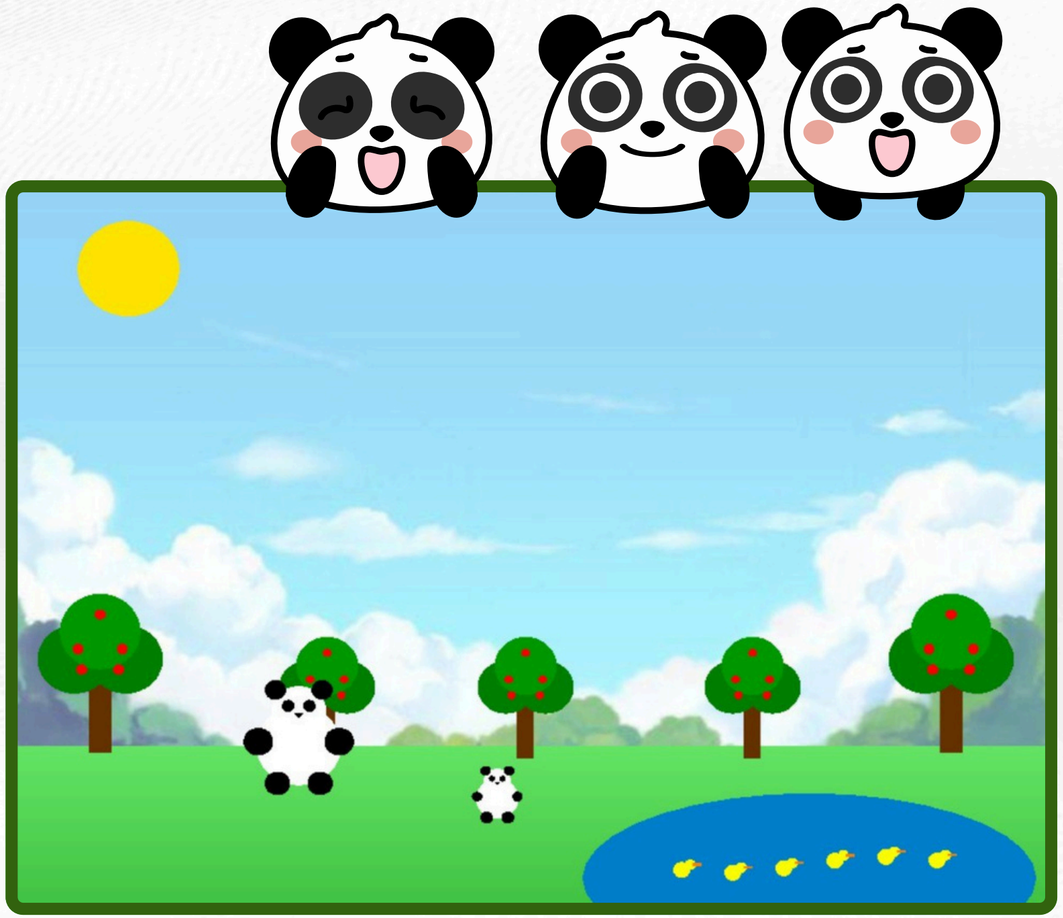

1. Modeling: Creation of detailed models of pandas through geometric modeling with realistic facial expressions.
2. Environment Interaction: Incorporation of environmental elements such as rain and adaptive lighting according to narrative requirements.
3. Visual Storytelling: Combination of animation techniques with dialogue text to create an effective narrative flow.
4. Scene Management: Implementation of scene management code to facilitate smooth progression of the story.
